

The Club CRM — Business Rules Needing Sign-Off

1 Pending bookings hold a card, not the money

When an event has auto-confirm switched off, the guest enters their card at checkout but **nothing is charged and no funds are reserved** — the card is simply saved against their record. Clicking **Approve** charges it at that moment.

The risk: if you approve several days later and the card has since expired or has no funds, the charge fails — and by then you have already counted the place as sold.

Please confirm: is card-on-file acceptable, or do you want a genuine authorisation hold? (*A hold reserves the money immediately, but expires after roughly 7 days — so bookings would have to be approved inside that window.*)

2 Cancelling a membership revokes access immediately, but billing runs to period end

Today, cancelling a membership cuts off portal access instantly, while Stripe keeps the subscription alive until the end of the period already paid for.

The effect: a member who has paid to the 30th but is cancelled on the 5th **loses 25 days they have paid for.**

Please confirm: should access continue to the end of the paid period, or is immediate cut-off intended?

3 Unpaid bookings hold a seat and can sell out an event

A pending (unpaid) booking counts against event capacity exactly like a confirmed one. Ten unapproved bookings on a ten-seat event means genuine buyers are told "fully booked" while no money has been taken.

Please confirm:

- Should pending bookings reserve a seat indefinitely?
- Should they expire automatically after a set time — 48 hours, for example?

4 The monthly introduction allowance is a warning, not a limit

TIER	PLAN	INTRODUCTIONS PER MONTH
Tier 1	Individual	3
Tier 2	Business	5
Tier 3	Corporate	10

Exceeding the allowance **blocks nothing**. The team simply sees a note saying the member is over. The counter resets on the 1st of each month, and unused introductions **do not roll over**.

Please confirm:

- Are 3 / 5 / 10 the right numbers?
- Should going over be blocked, or just flagged as it is now?
- Should unused introductions roll over to the next month?

5 The member health flags use thresholds we chose

FLAG	CURRENT RULE
At risk	Churn score of 60 or above
Renewal soon	Renewal within the next 30 days
Dormant	No event attended in 90+ days (or never)
Upgrade ready	Upgrade score of 70 or above

These decide who appears on the Member Success screen, so they directly drive who the team chases.

Please confirm — particularly "dormant at 90 days": for a club whose events may run monthly or quarterly, is 90 days genuinely dormant, or too aggressive?

6 Finance chasing escalates to Sarah after 7 days

When a recurring finance deliverable (VAT, payroll, management accounts) goes overdue:

WHEN	WHO IS EMAILED
Due date passes	The accountant
3 days late	The Finance Director
7 days late	Sarah

Each person is emailed **once only** — it does not nag repeatedly — and the chain stops as soon as the task is marked complete.

Please confirm: are 3 and 7 days the right intervals, and should the reminder repeat if it is still being ignored?

7 Renewal reminders start 90 days out

Members receive renewal reminders at **90, 60, 30 and 7 days** before their renewal date. At the 7-day mark, any member without an active auto-renewing subscription has a retention task raised for the team.

Please confirm: is 90 days too early to raise renewal? Are four reminders too many?

8 Rejecting an application refunds automatically

Rejecting a paid membership application triggers a Stripe refund of what the applicant paid and emails them about it — with no separate confirmation step.

Please confirm: should every rejection auto-refund in full, or should the refund be a separate manual decision each time?

9 Sponsor guests bypass the guest limit

Each event has two limits: a **total capacity** (how many people in the room) and a separate **guest limit** (how many of those may be outside guests rather than members).

Anyone booking through a **sponsor's personalised invite link ignores the guest limit** — they are treated as invited rather than walk-up. They are still counted against total capacity, so the room can never be oversold.

The effect: on an event for 50 with a 10-guest limit, sponsor bookings could fill 30 of the places, leaving only 20 for members. The guest limit no longer controls the member-to-guest balance.

Please confirm: is this intended? Should sponsor guests count towards the guest limit, or should sponsors have their own separate allocation per event?

10 Nobody chases sponsors past 14 days

Sponsors still sitting at "Proposed" are chased automatically at **3, 7 and 14 days** after the proposal was created. Each email is sent once.

After around three weeks the sponsorship drops out of the chasing sequence completely — no further email, and **no task is raised for anyone to follow it up**. The deal simply sits in the pipeline untouched.

Worth noting the contrast: the membership renewal sequence *does* create a task for the team at its final stage, so a person always picks it up. The sponsor sequence does not.

Please confirm: should a task be raised for the team when a sponsor goes quiet after 14 days, so an unanswered proposal is never silently dropped?
